Evolent Clinical Guideline 3140 for Cablivi™ (caplacizumab-yhdp)

Guideline Number:	Applicable Codes	
Evolent_CG_3140		
"Evolent" refers to Evolent Health LLC and Evolent Specialty Services, Inc. 		
Original Date:	**Last Revised Date:**	**Implementation Date:**
February 2019	July 2025	July 2025

TABLE OF CONTENTS

STATEMENT

Purpose

To define and describe the accepted indications for Cablivi (caplacizumab-yhdp) usage in the treatment of cancer, including FDA approved indications, and off-label indications.

Evolent is responsible for processing all medication requests from network ordering providers. Medications not authorized by Evolent may be deemed as not approvable and therefore not reimbursable.

The use of this drug must be supported by one of the following: FDA approved product labeling, CMS-approved compendia, National Comprehensive Cancer Network (NCCN), American Society of Clinical Oncology (ASCO) clinical guidelines, or peer-reviewed literature that meets the requirements of the CMS Medicare Benefit Policy Manual Chapter 15.

INDICATIONS

Continuation requests for a not-approvable medication shall be exempt from this Evolent policy provided

- The member has not experienced disease progression on the requested medication AND
- The requested medication was used within the last year without a lapse of more than 30 days of having an active authorization AND
- Additional medication(s) are not being added to the continuation request.

Acquired Thrombotic Thrombocytopenic Purpura (aTTP)

- The member has aTTP and Cablivi (caplacizumab-yhdp) is being used in combination with plasma exchange and immunosuppressive therapy (e.g., systemic corticosteroids, rituximab, cyclosporine, cyclophosphamide, or vincristine; such immunosuppressive therapy may be tapered or discontinued at the physician/provider's discretion).

CONTRAINDICATIONS/WARNINGS

- Contraindications
  - Previous severe hypersensitivity (e.g., urticaria) to caplacizumab-yhdp or any component of the formulation
- Warnings
  - Hemorrhage: Serious and fatal bleeding can occur. Risk of bleeding is increased in patients with underlying coagulopathies or on concomitant antiplatelet agents or anticoagulants. If clinically significant bleeding occurs, interrupt treatment. Withhold caplacizumab-yhdp 7 days prior to elective surgery, dental procedures, or other invasive interventions.

EXCLUSION CRITERIA

- Platelets are within normal levels, or the member is not at risk of bleeding.
- Dosing exceeds single dose limit of Cablivi (caplacizumab-yhdp) 11 mg.
- Treatment exceeds the maximum duration limit of 30 days beyond the last plasma exchange. If ADAMTS13 activity levels remain suppressed following the last plasma exchange, Cablivi (caplacizumab-yhdp) may be extended for an additional 28 days (for a total of 2 treatment courses).
- Investigational use of Cablivi (caplacizumab-yhdp) with an off-label indication that is not sufficient in evidence or is not generally accepted by the medical community. Sufficient evidence that is not supported by CMS recognized compendia or acceptable peer reviewed literature is defined as any of the following:
    - Whether the clinical characteristics of the patient and the cancer are adequately represented in the published evidence.
    - Whether the administered chemotherapy/biologic therapy/immune therapy/targeted therapy/other oncologic therapy regimen is adequately represented in the published evidence.
    - Whether the reported study outcomes represent clinically meaningful outcomes experienced by patients. Generally, the definitions of Clinically Meaningful outcomes are those recommended by ASCO, e.g., Hazard Ratio of less than 0.80 and the recommended survival benefit for OS and PFS should be at least 3 months.
    - Whether the experimental design, considering the drugs and conditions under investigation, is appropriate to address the investigative question. (For example, in some clinical studies, it may be unnecessary or not feasible to use randomization, double blind trials, placebos, or crossover).
    - That non-randomized clinical trials with a significant number of subjects may be a basis for supportive clinical evidence for determining accepted uses of drugs.
    - That case reports are generally considered uncontrolled and anecdotal information and do not provide adequate supportive clinical evidence for determining accepted uses of drugs.
    - That abstracts (including meeting abstracts) without the full article from the approved peer-reviewed journals lack supporting clinical evidence for determining accepted uses of drugs.

CODING AND STANDARDS

Codes

- C9047 - Injection, caplacizumab-yhdp, 1 mg

Applicable Lines of Business

☐	CHIP (Children's Health Insurance Program)
☒	Commercial
☒	Exchange/Marketplace
☒	Medicaid
☐	Medicare Advantage

POLICY HISTORY

Date	Summary
July 2025	• Converted to new Evolent guideline template • This guideline replaces UM ONC_1353 Cablivi (caplacizumab-yhdp) • Updated references
July 2024	• Updated NCH verbiage to Evolent
