STATEMENT

Purpose

To define and describe the accepted indications for Akeega (niraparib and abiraterone acetate) usage in the treatment of cancer, including FDA approved indications, and off-label indications.

Evolent is responsible for processing all medication requests from network ordering providers. Medications not authorized by Evolent may be deemed as not approvable and therefore not reimbursable.

The use of this drug must be supported by one of the following: FDA approved product labeling, CMS-approved compendia, National Comprehensive Cancer Network (NCCN), American Society of Clinical Oncology (ASCO) clinical guidelines, or peer-reviewed literature that meets the requirements of the CMS Medicare Benefit Policy Manual Chapter 15.

INDICATIONS

Continuation requests for a not-approvable medication shall be exempt from this Evolent policy provided

- The member has not experienced disease progression on the requested medication AND
- The requested medication was used within the last year without a lapse of more than 30 days of having an active authorization AND
- Additional medication(s) are not being added to the continuation request.

Prostate Cancer

- Akeega (niraparib and abiraterone acetate) may be used with prednisone in adult members with deleterious or suspected deleterious *BRCA*-mutated metastatic castration-resistant prostate cancer (mCRPC), or with deleterious or suspected deleterious *BRCA2*-mutated metastatic castration-sensitive prostate cancer (mCSPC). Members receiving Akeega (niraparib and abiraterone acetate) should also receive a gonadotropin-releasing hormone (GnRH) analog concurrently or should have had bilateral orchiectomy.

CONTRAINDICATIONS/WARNINGS

- None

EXCLUSION CRITERIA

- Disease progression while taking Akeega (niraparib and abiraterone acetate).
- Concurrent use with other anticancer therapies.

- Dosing exceeds single dose limit of Akeega (niraparib and abiraterone acetate) 200 mg niraparib/1,000 mg abiraterone acetate.
- Treatment exceeds the maximum limit of 60 (50 mg/500 mg) or 60 (100 mg/500 mg) tablets/month.
- Investigational use of Akeega (niraparib and abiraterone acetate) with an off-label indication that is not sufficient in evidence or is not generally accepted by the medical community. Sufficient evidence that is not supported by CMS recognized compendia or acceptable peer reviewed literature is defined as any of the following:
    - Whether the clinical characteristics of the patient and the cancer are adequately represented in the published evidence.
    - Whether the administered chemotherapy/biologic therapy/immune therapy/targeted therapy/other oncologic therapy regimen is adequately represented in the published evidence.
    - Whether the reported study outcomes represent clinically meaningful outcomes experienced by patients. Generally, the definitions of Clinically Meaningful outcomes are those recommended by ASCO, e.g., Hazard Ratio of < 0.80 and the recommended survival benefit for OS and PFS should be at least 3 months.
    - Whether the experimental design, considering the drugs and conditions under investigation, is appropriate to address the investigative question. (For example, in some clinical studies, it may be unnecessary or not feasible to use randomization, double blind trials, placebos, or crossover).
    - That non-randomized clinical trials with a significant number of subjects may be a basis for supportive clinical evidence for determining accepted uses of drugs.
    - That case reports are generally considered uncontrolled and anecdotal information and do not provide adequate supportive clinical evidence for determining accepted uses of drugs.
    - That abstracts (including meeting abstracts) without the full article from the approved peer-reviewed journals lack supporting clinical evidence for determining accepted uses of drugs.

CODING AND STANDARDS

Codes

- J8999 - niraparib and abiraterone

Applicable Lines of Business

☐	CHIP (Children's Health Insurance Program)
☒	Commercial
☒	Exchange/Marketplace
☒	Medicaid
☐	Medicare Advantage

POLICY HISTORY

Date	Summary
February 2026	• Updated indication section
January 2026	• Updated prostate cancer indication • Updated references
October 2025	• Converted to new Evolent guideline template • This guideline replaces UM ONC_1485 Akeega (Niraparib and abiraterone acetate) • Update indication section • Added maximum dosage form quantities in exclusion criteria • Updated references
October 2024	• Updated references
