Drug Policy:
Bone Modifying Agents (Aredia, Zometa, Xgeva/Prolia)

I. PURPOSE
To define and describe the accepted indications for Bone Modifying Agents (Aredia, Zometa, Xgeva/Prolia) usage in the treatment of cancer, including FDA approved indications, and off-label indications.

New Century Health (NCH) is responsible for processing all medication requests from network ordering providers. Medications not authorized by NCH may be deemed as not approvable and therefore not reimbursable.

The use of this drug must be supported by one of the following: FDA approved product labeling, CMS-approved compendia, National Comprehensive Cancer Network (NCCN), American Society of Clinical Oncology (ASCO) clinical guidelines, or peer-reviewed literature that meets the requirements of the CMS Medicare Benefit Policy Manual Chapter 15.

II. INDICATIONS FOR USE/INCLUSION CRITERIA
A. PREFERRED MEDICATION GUIDANCE FOR INITIAL REQUEST:
1. When health plan Medicaid coverage provisions—including any applicable PDLs (Preferred Drug Lists)—conflict with the coverage provisions in this drug policy, health plan Medicaid coverage provisions take precedence per the Preferred Drug Guidelines OR

2. When health plan Exchange coverage provisions—including any applicable PDLs (Preferred Drug Lists)—conflict with the coverage provisions in this drug policy, health plan Exchange coverage provisions take precedence per the Preferred Drug Guidelines OR

3. For Health Plans that utilize NCH UM Oncology Clinical Policies as the initial clinical criteria, the Preferred Drug Guidelines shall follow NCH L1 Pathways when applicable, otherwise shall follow NCH drug policies AND

4. Continuation requests of previously approved, non-preferred medication are not subject to this provision AND

5. When available, generic alternatives are preferred over brand-name drugs.

B. NOTE: The preferred agent, per NCH Policies & NCH Pathway, is IV bisphosphonate Zometa/Reclast (zoledronic acid) or Aredia (pamidronate) over Xgeva/Prolia (denosumab) for all indications supported in this policy (except for Giant Cell Tumor of Bone). Xgeva/Prolia (denosumab) is an acceptable alternative for members with documented intolerance/contraindications/renal impairment and a CrCl of < 30 mL/min.

C. Hypercalcemia of Malignancy

1. Zometa (zoledronic acid), or Aredia (pamidronate) are being used in conjunction with hydration for hypercalcemia as defined as a corrected calcium of ≥ 12 mg/dL (corrected for albumin level). The following formula is used to calculate the corrected calcium level:

   a. Corrected Calcium (mg/dL) = Calcium + 0.8 x (4 – patient Albumin)

D. Multiple Myeloma

1. The member has multiple myeloma and Zometa (zoledronic acid), or Aredia (pamidronate) are being used in combination with anti-myeloma therapy.

E. Solid Tumors with Skeletal Metastases

1. Zometa (zoledronic acid) or Aredia (pamidronate) is being used for a member with a solid tumor and skeletal metastases documented on any imaging study.

DOSE ADJUSTMENTS FOR ZOLEDRONIC ACID FOR USE IN MYELOMA & SOLID TUMORS WITH SKELETAL METASTASES:

<table>
<thead>
<tr>
<th>Creatinine Clearance in ml/min</th>
<th>Dose of Zoledronic Acid</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt;60</td>
<td>4 mg</td>
</tr>
<tr>
<td>50-60</td>
<td>3.5 mg</td>
</tr>
<tr>
<td>40-49</td>
<td>3.3 mg</td>
</tr>
<tr>
<td>30-39</td>
<td>3.0 mg</td>
</tr>
<tr>
<td>&lt;30</td>
<td>Use is not recommended</td>
</tr>
</tbody>
</table>

F. Breast Cancer

1. The member has non-metastatic breast cancer and Zometa (zoledronic acid) is being used for the prevention or treatment of osteoporosis when the member is receiving adjuvant aromatase inhibitor therapy and/or ovarian suppression/ablation OR

2. Zometa (zoledronic acid) is being used as a part of the adjuvant therapy regimen in combination with adjuvant endocrine treatment of early breast cancer in a postmenopausal woman or a premenopausal woman on ovarian suppression. Note: Typical dosing in this setting is Zometa (zoledronic acid) 4 mg iv every 6 months.
G. Prostate Cancer
   1. The member has prostate cancer and Zometa (zoledronic acid) is being used for the following:
      a. Prevention or treatment of osteoporosis during androgen deprivation therapy for members who are 70 years or higher or are at high risk for fractures.

H. Giant Cell Tumor of Bone
   1. The member has giant cell tumor of the bone and Xgeva (denosumab) is being used as a single agent or combined with interferon alfa peginterferon or radiation therapy for localized disease OR as a single agent for metastatic disease.

III. EXCLUSION CRITERIA
   A. Members with creatinine clearance < 60 mL/min without Zometa dose adjustment, see table above.
   B. Dosing exceeds single dose limits for Zometa 4 mg, Aredia 90 mg, and Xgeva 120 mg, Prolia 60 mg.
   C. Indications not supported by CMS recognized compendia or acceptable peer reviewed literature.

IV. MEDICATION MANAGEMENT
   A. Please refer to the FDA label/package insert for details regarding these topics.

V. APPROVAL AUTHORITY
   A. Review – Utilization Management Department
   B. Final Approval – Utilization Management Committee

VI. ATTACHMENTS
   A. None

VII. REFERENCES
