I. PURPOSE

To define and describe the accepted indications for Alimta or Pemfexy (pemetrexed) usage in the treatment of cancer, including FDA approved indications, and off-label indications.

New Century Health (NCH) is responsible for processing all medication requests from network ordering providers. Medications not authorized by NCH may be deemed as not approvable and therefore not reimbursable.

The use of this drug must be supported by one of the following: FDA approved product labeling, CMS-approved compendia, National Comprehensive Cancer Network (NCCN), American Society of Clinical Oncology (ASCO) clinical guidelines, or peer-reviewed literature that meets the requirements of the CMS Medicare Benefit Policy Manual Chapter 15.

II. INDICATIONS FOR USE/INCLUSION CRITERIA

A. PREFERRED MEDICATION GUIDANCE FOR INITIAL REQUEST:

1. When health plan Medicaid coverage provisions—including any applicable PDLs (Preferred Drug Lists)—conflict with the coverage provisions in this drug policy, health plan Medicaid coverage provisions take precedence per the [Preferred Drug Guidelines](#) OR

2. When health plan Exchange coverage provisions-including any applicable PDLs (Preferred Drug Lists)-conflict with the coverage provisions in this drug policy, health plan Exchange coverage provisions take precedence per the [Preferred Drug Guidelines](#) OR
3. For Health Plans that utilize NCH UM Oncology Clinical Policies as the initial clinical criteria, the [Preferred Drug Guidelines](#) shall follow [NCH L1 Pathways](#) when applicable, otherwise shall follow NCH drug policies AND
4. Continuation requests of previously approved, Non-Preferred medication are not subject to this provision AND
5. When applicable, generic alternatives are preferred over brand-name drugs.

B. Non-Small Cell Lung Cancer (NSCLC)

1. The member has recurrent or metastatic non-squamous NSCLC and Alimta or Pemetrexed (pemetrexed) may be used for **ANY** of the following:
 - a. First line therapy for EGFR & ALK negative disease in combination with carboplatin/cisplatin with or without pembrolizumab OR
 - b. Subsequent therapy in combination with carboplatin/cisplatin OR
 - c. Subsequent therapy as a single agent OR
 - d. Maintenance therapy as a single agent after response or stable disease following first-line therapy or maintenance therapy in combination with pembrolizumab following first-line therapy with [pembrolizumab + pemetrexed + cisplatin/carboplatin].
2. **NOTE:** Per NCH Pathway & NCH Policy, [Bevacizumab + Carboplatin/Cisplatin + Pemetrexed] followed by maintenance [Bevacizumab + Pemetrexed] is a Non-Preferred regimen. This recommendation is based on the lack of Level 1 Evidence (randomized clinical trial and/or meta-analyses) to show superior outcomes compared to NCH Preferred regimens for the initial treatment of NSCLC. Please refer to NCH Pathway for the preferred treatments recommended for use in the above setting.

C. Malignant Pleural Mesothelioma

1. The member has malignant pleural mesothelioma and Alimta or Pemetrexed (pemetrexed) may be used in **ONE** of the following:
 - a. In combination with cisplatin/carboplatin for stage I-IIIa clinically operable disease OR
 - b. As first line therapy for unresectable or metastatic disease as a single agent or in combination with cisplatin or carboplatin with or without bevacizumab OR
 - c. As subsequent therapy as a single agent (if not previously used in the first line setting).

III. EXCLUSION CRITERIA

- A. Dosing exceeds single dose limit of Alimta or Pemetrexed (pemetrexed) 500 mg/m².
- B. Disease progression on Pemetrexed containing regimen.
- C. Investigational use of Alimta or Pemetrexed (pemetrexed) with an off-label indication that is not sufficient in evidence or is not generally accepted by the medical community. Sufficient evidence that is not supported by CMS recognized compendia or acceptable peer reviewed literature is defined as any of the following:
 1. Whether the clinical characteristics of the patient and the cancer are adequately represented in the published evidence.

2. Whether the administered chemotherapy/biologic therapy/immune therapy/targeted therapy/other oncologic therapy regimen is adequately represented in the published evidence.
3. Whether the reported study outcomes represent clinically meaningful outcomes experienced by patients. Generally, the definition of Clinically Meaningful outcomes are those recommended by ASCO, e.g., Hazard Ratio of < 0.80 and the recommended survival benefit for OS and PFS should be at least 3 months.
4. Whether the experimental design, in light of the drugs and conditions under investigation, is appropriate to address the investigative question. (For example, in some clinical studies, it may be unnecessary or not feasible to use randomization, double blind trials, placebos, or crossover).
5. That non-randomized clinical trials with a significant number of subjects may be a basis for supportive clinical evidence for determining accepted uses of drugs.
6. That case reports are generally considered uncontrolled and anecdotal information and do not provide adequate supportive clinical evidence for determining accepted uses of drugs.
7. That abstracts (including meeting abstracts) without the full article from the approved peer-reviewed journals lack supporting clinical evidence for determining accepted uses of drugs.

IV. MEDICATION MANAGEMENT

- A. Please refer to the FDA label/package insert for details regarding these topics.

V. APPROVAL AUTHORITY

- A. Review – Utilization Management Department
- B. Final Approval – Utilization Management Committee

VI. ATTACHMENTS

- A. None
