

PRIOR AUTHORIZATION CRITERIA

BRAND NAME

(generic)

(acamprosate calcium)

Status: CVS Caremark Criteria

Type: Initial Prior Authorization

POLICY

FDA-APPROVED INDICATIONS

Acamprosate calcium delayed-release tablets are indicated for the maintenance of abstinence from alcohol in patients with alcohol dependence who are abstinent at treatment initiation. Treatment with acamprosate calcium delayed-release tablets should be part of a comprehensive management program that includes psychosocial support.

The efficacy of acamprosate calcium delayed-release tablets in promoting abstinence has not been demonstrated in subjects who have not undergone detoxification and not achieved alcohol abstinence prior to beginning acamprosate calcium delayed-release tablets treatment. The efficacy of acamprosate calcium delayed-release tablets in promoting abstinence from alcohol in polysubstance abusers has not been adequately assessed.

COVERAGE CRITERIA

The requested drug will be covered with prior authorization when the following criteria are met:

- The patient has a diagnosis of alcohol use disorder as defined by the Diagnostic and Statistical Manual of Mental Disorders (DSM-5)

AND

- The requested drug will be used as part of a comprehensive management program that includes psychosocial support

AND

- The request is for continuation of therapy

AND

- The patient has achieved or maintained a positive clinical response (e.g., abstinence from alcohol, increase in abstinent days, decrease in heavy drinking episodes, improved physical health, improvements in psychosocial functioning)

OR

- The patient has experienced improvement on prior therapy and the requested drug will be restarted due to relapse

OR

- The patient is, or the patient will be, abstinent from alcohol at treatment initiation
